

**RE: P/N: G18MFS (PATHFINDERLED MULTI FUNCTION FOG LIGHT KIT)**

To our partners,

We were made aware that the sub-harness cable provided in our PathFinderLED Multi Function Fog Light Kit (G18MFS) will not work on the 2020 Gold Wings. We have found that the sub-harness cable needs to be modified or replaced for the kit to work on the 2020 Gold Wing. This is due to the fact that Honda reversed the wiring in their factory fog light connector for the 2020 models. We are providing two resolutions below:

**TWO OPTIONS AVAILABLE:**

**OPTION 1.** Modify the current sub-harness cable by reversing the wires. This will also require soldering work to be done. See *How-To Modify Connector steps on (PAGE 2)*.

**OPTION 2.** For those that do not wish to perform option 1, they can simply order an updated sub-harness cable specifically for the 2020 Gold Wing. This part will be free of charge, just pay for shipping. **To order the updated sub-harness cable use P/N: G20MFS-AC**

**NOTE:** We have added a new part number to order the complete light kit for 2020 models. Please use **P/N: G20MFS** which will ship with the updated sub-harness cable.

If your customer has already purchased a 2018-2019 kit and has a 2020 motorcycle model, we will send them the updated sub-harness cable once it becomes available (Mid September 2020).

Requests/Questions, please email [G20MFS\\_CABLE@SoCalMotoGear.com](mailto:G20MFS_CABLE@SoCalMotoGear.com)

Proof of purchase will be required for all requests.

## How-To Modify current sub harness from you G18MFS KIT to fit on a Gold Wing 2020 motorcycle model.

### STEP 1

- Cut off the power input connector cable as shown.  
The middle of this sub-wire .

### STEP 2

#### Use wire stripper – then reverse wires

- Strip the wires appx ¼ inch (as shown below).
- Solder the green-to-brown wire and brown-to-green wire.  
(This is to reverse the current wire connection.)
- Secure the connections by using heat shrink tubing OR electrical tape.
